

GUIDANCE FOR PLANTING POTTED TREES & SHRUBS

If you're unable to plant your trees immediately, store them in a cool area, sheltered from direct sunlight and strong winds, while ensuring the roots remain moist. Avoid delaying the planting for more than one week.

Try to plant on cool, cloudy, humid days.

Always call your local utility company before digging

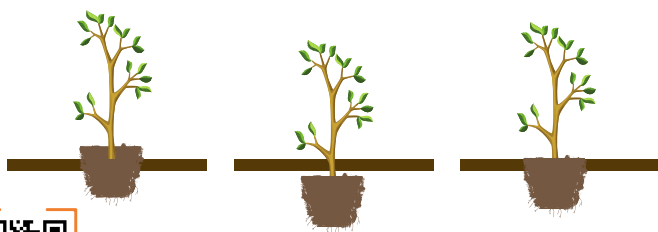

Planting Depth

Too high.

Too low.

Correct depth.

After Planting Maintenance

- Proper care the first year sets the stage for the tree's lifetime.
- Giving the tree 1 inch of water every 7-10 days is more beneficial than watering lightly every couple of days.
- Maintain the area around the tree to manage grass and weed competition.
- DO NOT weed whip or mow close enough that it may damage the bark of tree.
- If pests are a concern, use protective devices such as tree tubes or mesh fencing.
