

**Consider these questions
when you are setting goals
for wildlife management:**

- Are your goals environmental, recreational, or economically driven?
- What existing wildlife is on your property and which of those species would you like to benefit most or encourage more of to your property?
- What is the habitat needs of that specific species of wildlife and which of those needs exist on your property and which of them don't exist or need improvement?
- Are those needs realistic and sustainable for your property?
- What habitat management practices would best provide those missing habitat needs and desired wildlife?
- Which of those practices do you feel comfortable managing and which of those will you need extra assistance and equipment to accomplish?

**Sustain & Enhance your
Land's Legacy.**

Maximize your resources for wildlife and ensure your woodland's longevity by creating a habitat plan to act as a blueprint for your property.

Habitat Planning

Getting Started

Kanati

Gift to Wildlife the Kanati Experience.

The Vision

A habitat plan serves as a road map to help landowners envision their property's fullest potential.

Kanati creates habitat plans that focus on long-term wildlife planning, customized specifically for each landowner's unique piece of land.

The starting point for "what should I do?" is always "what do you want?"

Clearly defining your objectives will help steer your management decisions. When setting these goals, consider a long-term perspective, looking 5 to 10 years ahead.

After listing your goals, prioritize them. A single management action can often serve multiple goals, but the implementation method may vary based on your priorities. Focus your management efforts where you will achieve the highest return on your investment of time and resources.

Each wildlife species has its unique habitat requirements. The management actions you implement on your property will ultimately favor certain species over others.

If attracting wildlife is a priority for your property, it's essential to identify which species matter most to you.

Once you know what you want, you are ready to begin the process of planning.

The Process

On-site Evaluation of the Land

Kanati assesses the property's current habitat conditions and discuss landowner's goals and priorities.

Develop a Comprehensive Habitat Plan

A systematic plan is assembled with:

- Drone images of property and a proposed recommendation map.
- A detailed breakdown of each recommended activity and how they apply to your property.
- Hunting strategies and food plot recommendations.
- Steps of action and a timeline.
- A cost estimate with options for financial assistance.
- Management strategies.

Implementation

Kanati offers complete site-prep and installment as well as technical assistance.
